### Highlights

### OCTOBER 1967

<u>Producer Deliveries</u>. A total of 122,713 producers delivered 3.8 billion pounds of milk to regulated handlers in 66 comparable markets during October 1967. This is 0.2 percent below producer deliveries in October 1966. Average daily delivery per producer increased from 950 pounds in October 1966 to 1,003 pounds in October of this year. Producer numbers, producer deliveries, average butterfat percentages, and average daily deliveries per producer for individual markets are shown on table 3.

Producer Deliveries Used in Class I. The volume of producer deliveries used in Class I in 66 markets decreased 1.6 percent from last year, to a total of 2.7 billion pounds for the month of October 1967. This is the thirteenth consecutive month in which Class I sales in comparable markets have been below those for the corresponding month a year ago. The average utilization percentage for October was 70 percent, down from 71 percent last year. Twenty-nine markets showed an increase in the utilization percentage, 5 showed no change, and the remaining 32 markets showed a decrease (See table 4).

Gross Class I sales, which comprise total Class I sales by regulated handlers, in-and-out of defined marketing areas, decreased 1.2 percent in the 66 markets for the month of October.

Minimum Prices. The weighted average Class I price paid by handlers in the 66 markets for 3.5 percent milk was \$5.97 per hundredweight, 14 cents lower than the \$6.11 per hundredweight price in October 1966. Minimum Class I prices for October were higher in three markets, the same in two markets, and lower in the remaining 61 markets.

Producers in the 66 markets received a weighted average blend price of \$5.52 per hundredweight for 3.5 percent milk, six cents lower than the \$5.58 price received by producers in October 1966. Producers received higher blend prices in 13 markets, and a lower price in the remaining 53 markets. Class prices, blend prices, and associated butterfat differentials, by markets are reported on table 1.

Fluid Milk Sales. Total in-area fluid milk sales for October 1967 in 67 marketing areas are estimated to be about 2.2 billion pounds, 0.7 percent below such sales in October of last year. Complete September in-area sales for total fluid items, and for the four major fluid product groupings (whole milk, skim milk items, mixtures, and cream), are reported on table 6.

### YEAR TO DATE

Minimum Prices. The weighted average Class I price for the January-October period for the 66 markets was \$5.93, or 36 cents higher than the \$5.57 price in 1966. The 1967 weighted average blend price, at \$5.19, was 26 cents higher than the blend price of \$4.93 reported for this period in 1966 (See table 2).

Producer Deliveries and Deliveries Used in Class I. Milk deliveries and deliveries used in Class I are reported for individual markets on table 5. In the first ten months of this year, compared to the same period in 1966, producer deliveries for the 66 markets were up 0.8 percent, and deliveries used in Class I were down 2.7 percent. Data for the 66 markets and for all markets are summarized below:

| Producer Milk | Deliveries | and | Deliveries | Used | in | Class | Ι. | January-October |

<sup>1/ &</sup>quot;Production of Manufactured Dairy Products," 1966, USDA-SRS, Da 2-1 (67).

<sup>2/</sup> Market Administrators Bulletins and Product Reports. Includes producer milk and some other source milk used to produce manufactured dairy products in regulated pool plants as well as milk shipped to nonpool plants for processing.

<sup>3/</sup> All cheese except creamed cottage cheese.

<sup>4/</sup> Includes dry whole milk, milk used in candy, soup, bakery products, etc.

Producer deliveries of milk to handlers regulated under Federal milk orders represented nearly 50 percent of all milk and cream delivered to all plants and dealers in the United States in 1966. Approximately one-third of these deliveries was used in the production of manufactured dairy products.

The data in table 10 compares whole milk equivalent (based on milkfat content) used in the production of various manufactured products in Federal order markets with total whole milk equivalent used in the production of all manufactured products in the United States. 1/

A total of 57.9 billion pounds of net whole milk equivalent was used in the production of manufactured dairy products in the United States in 1966. Butter represented the largest single use at 41 percent; cheese production accounted for 29 percent; frozen dairy products (including ice cream) and condensed milk, 20 percent; evaporated milk, 6 percent; cottage cheese, 2 percent; and dry whole milk and other factory products, about 2 percent of the total net whole milk equivalent used in all manufactured dairy products.

A total of 18.7 billion pounds of surplus whole milk equivalent was used in the production of manufactured dairy products by handlers regulated under Federal order markets in 1966. Frozen dairy products (including ice cream) and condensed milk represented the largest use at 41.8 percent; butter production accounted for 29.3 percent; cheese, 15.6 percent; evaporated milk, 4.6 percent; cottage cheese, 4.6 percent; and dry whole milk and other factory products, 4.1 percent of the total whole milk equivalent used in all manufactured dairy products in Federal order markets.

While surplus Federal order milk used in factory products accounted for only 32 percent of the United States total, the production of certain products was relatively unimportant while production of others was important when compared to United States production. In the case of butter and cheese, Federal order milk accounted for less than 20 percent of the total United States production of these two products (New York, Chicago, and Milwaukee accounted for 38 percent of the Federal order milk used in these two products). In the case of the production of some of the so-called "soft products", mainly cottage cheese and frozen dairy products, Federal order milk accounted for 68 percent of the total United States production of these products (cottage cheese accounted for 83 percent and frozen products plus condensed whole milk 67 percent).

The relative importance of cottage cheese and frozen desserts made from Federal order milk is associated with the nature of the order program and with the nature of the products themselves. Handlers regulated under Federal milk orders are primarily handlers of fluid milk (approximately two-thirds of producer deliveries to Federal order handlers is used in fluid milk products and as such, accounts for about two-thirds of the total fluid sales in the country). Like fluid products, cottage cheese, and frozen dairy products are perishable and bulky. Also, there is a general demand for these products on most fluid milk routes. They are often processed in the same plants where fluid milk is processed and packaged. For these reasons, cottage cheese, and frozen dairy products have become closely associated with fluid milk markets; and their production and distribution have become an integral part of many fluid milk operations. As the scope of the Federal order program has expanded in relation to the total fluid milk industry, so has the production and handling of these manufactured products by order handlers increased in relation to total United States production.

### MAJOR ORDER ACTIONS, OCTOBER 1967

### Suspensions:

6 Markets - October 4 (32 FR 13804, 10/4/67).

Connecticut Delaware Valley Massachusetts-Rhode Island New York-New Jersey Upper Chesapeake Bay Washington, D. C.

This suspension order eliminates the seasonal variation in the amounts by which the average price for milk for manufacturing purposes, f.o.b. plants, United States, is adjusted in determining the minimum prices to be paid for reserve milk supplies in the northeastern markets. Action suspends all of the monthly seasonal adjustments and replaces them with an annual adjustment equal to the one previously applicable to the month of February. The suspension applies to milk delivered on and after September 1, 1967.

Mississippi - October 1 (32 FR 13713, 9/30/67). Action postpones the effective date of the supply-demand adjustor from October 1 to December 1, 1967.

New Orleans - October 1 (32 FR 13855, 10/5/67). Action suspends the supply-demand adjustor to the Class I price for the months of October and November 1967.

Ozarks - October 1 (32 FR 15093, 10/1/67). Action suspends the 40 percent shipping requirement for pool supply plants for the month of October 1967.

### New Order:

Minnesota-North Dakota - October 1 (32 FR 13703, 9/30/67). (Pricing provisions are effective November 1, 1967). The Minnesota-North Dakota marketing area consists of the following Minnesota, North Dakota, and South Dakota counties: Minnesota: Becker, Beltrami, Big Stone, Clay, Clearwater, Douglas, Grant, Hubbard, Kittson, Lake of the Woods, Mahnomen, Marshall, Norman, Otter Tail, Pennington, Polk, Red Lake, Roseau, Stevens, Traverse, Wadena, and Wilkin. North Dakota: Barnes, Cass, Cavalier, Dickey, Grand Forks, Griggs, La Moure, Nelson, Pembina, Ramsey, Ransom, Richland, Sargent, Steele, Traill, and Walsh. South Dakota: Grant, Marshall, and Roberts. The "base zone" includes that portion of the marketing area in the counties of Clay, Marshall, Norman, Pennington, Polk, and Red Lake, all in the State of Minnesota; and the counties of Cass, Grand Forks, and Traill, all in the State of North Dakota. Population (1960 Census) 640,666.

The order defines a handler as the operator of one or more pool plants, a partially regulated distributing plant, or an other order plant; a producer-handler or a cooperative association. A handler or a cooperative association may divert producer milk to nonpool plants without limit on any day during the months of March through June. During the months of July through February a handler or a cooperative association may divert not more than 50 percent of the milk of all producers whose milk has been received at a pool plant for at least 3 days during the month. A producer-handler is defined as any person who operates, as his personal enterprise and at his personal risk, a dairy farm and a distributing plant, and who receives no milk from other dairy farmers or from sources other than pool plants. A producer-handler may not receive more than 3,000 pounds of milk and fluid milk products during the month from any source.

A pool distributing plant must have route disposition of at least 20 percent of its "Grade A" receipts during March through June and 25 percent during July through February. At least 15 percent of such receipts must be disposed of on routes in the marketing area. A pool supply plant must ship at least 25 percent of its producer receipts during the month to pool distributing plants. If this requirement is met during each of the months of August through November, the plant has automatic pool plant status during the months of March through June. Definition of a nonpool plant includes an other order plant, a producer-handler plant, a partially regulated distributing plant, and an unregulated supply plant.

Class I milk is all skim milk and butterfat disposed of in the form of fluid milk products, in end-of-month inventory of packaged fluid milk products, and not classified as Class II. Fortified fluid milk products would be classified as Class I to the extent of the weight of an unmodified fluid milk product of the same nature and butterfat content. Class II milk is all skim milk and butterfat: Used to produce any product other than a fluid milk product; dumped or disposed of for livestock feed; in skim equivalent of fortified products not accounted for as Class I; in end-of-month inventory of bulk fluid milk products; and, in shrinkage.

The Class I price for the current month is to be announced on or before the 6th day of each month. The uniform price is to be announced on or before the 12th day of the following month. Order provides that a nonpool plant must be located not more than 300 miles from the nearer of Fargo or Grand Forks, N. Dak., in order for a pool plant to receive classification in a class other than Class I for bulk transfers.
